### *Election/Restrictions*

---

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-66, and 72-74 drawn to "process of producing the electrode material and the structural body", classified in class 252, subclass 500+.
- II. Claims 67-71, drawn to an "electrode structural body", classified in class 429, subclass 128.
- III. Claims 72-74, drawn to "process for producing electrode structural body", classified in class IV. Claims 75-76, drawn to "rechargeable lithium battery", classified in class 429, subclass 231.95.
- IV. Claims 77-80, drawn to process for producing a rechargeable lithium battery", classified in class 29, subclass 886.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the instant claimed process can be used to make a capacitor that is totally different than the instant claimed electrode structural body.

Inventions IV and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the

process could be used to make an alkaline battery that is totally different than the instant claimed rechargeable lithium battery.

Inventions (I and II) and (III and IV) are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as electrical double layer capacitor and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for any one group is not required for the other remaining groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

Art Unit: 1751

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
